Saturn ONE High Efficiency
MODEL: BELT DRIVE TRASMISSION

Modello:	Trasmissione a cinghia
Modèle:	Commande par courroie
Modell:	Riemenantrieb
Modelo:	Transmisión por correa
Modelo:	Acionamento por correias

MOTOR POWER: 1,5 HP

Potenza Motore	1,5 Hp
Puissance moteur	1,5 Hp
Motorleistung	1,5 Hp
Potencia del motor	1,5 Hp
Potência do motor	1,5 Hp

PROPELLER: 3 BLADES

Elica	3 Pale
Hélice	3 Pales
Propeller	3 Schaufeln
Hélice	3 álabes
Hélice	3 Pás

Saturn ONE High Pressure
MODEL: BELT DRIVE TRASMISSION

Modello:	Trasmissione a cinghia
Modèle:	Commande par courroie

/ Schrauben und Schraubenmuttern /
Tornillos y tuercas / Parafusos e porcas

Place v-belt (1) on the pulleys (2) and (3) and then rotate the propeller clockwise in order to tighten the v-belt on the pulleys. Check tensioning: right tensioning is obtained when tension over the v-belt corresponds to a resonance frequency of 60 ± 2 Hz measured by a v-belt tension meter like the "Trummy 2" manufactured by Fag or the "Ten-Sit" manufactured by Sit.

Positionieren Sie den Keilriemen (1) auf die Riemenscheiben (2) und (3), und drehen Sie dann den Propeller im Uhrzeigersinn, um die Keilriemen auf Riemenscheiben festzuziehen. Prüfen Sie die Spannung: die richtige Spannung ist erreicht, wenn die Keilriemenspannung einer Resonanzfrequenz von 60 ± 2 Hz entspricht, die von einem Spannungsmessgerät für Keilriemen, wie dem "Trummy 2", von Fag oder dem "Ten-Sit" von Sit gemessen wurde.

Posizionare la cinghia trapezoidale (1) sulle pulegge (2) e (3), quindi ruotare l'elica in senso orario per stringere la cinghia trapezoidale sulle pulegge. Controllare il tensionamento: il corretto tensionamento si ottiene quando la tensione sulla cinghia trapezoidale corrisponde a una frequenza di risonanza di 60 ± 2 Hz ottenuta da un misuratore di tensione per cinghie trapezoidali come il "Trummy 2" prodotto da Fag o il "Ten-Sit" prodotto da Sit.

Posicione la correa trapezoidal (1) sobre las poleas (2) y (3) y rote la hélice en sentido contrario a las agujas del reloj para apretar la correa trapezoidal a las poleas. Compruebe el tensado: el tensado correcto se obtiene cuando la tensión sobre la correa trapezoidal corresponde a una frecuencia de resonancia de 60 ± 2 Hz obtenida por un medidor de tensión para correas trapezoidales como el "Trummy 2" producido por Fag o el "Ten-Sit" producido por Sit.

Placer la courroie trapézoïdale (1) sur les poulies (2) et (3), puis tourner l'hélice dans le sens horaire pour tendre la courroie trapézoïdale sur les poulies. Contrôler la tension : la bonne tension s'obtient lorsque la tension sur la courroie trapézoïdale correspond à une fréquence de résonance de 60 ± 2 Hz obtenue par un tensiomètre pour les courroies trapézoïdales tel que le "Trummy 2" produit par Fag ou le "Ten-Sit" produit par Sit.

Posicionar a correa trapezoidal (1) nas polias (2) e (3), e depois rodar a hélice em sentido horário para apertar a correa trapezoidal nas polias. Verificar a tensão: a tensão correta obtém-se quando a tensão na correa trapezoidal corresponde a uma frequência de ressonância de 60 ± 2 Hz obtida por um medidor de tensão para correias trapezoidais como o "Trummy 2" produzido pela Fag ou o "Ten-Sit" produzido pela Sit.
